

Amendments to the Claims

Please cancel Claims 60, 67 and 73, without prejudice to or disclaimer of the subject matter recited therein.

Please amend Claims 59, 61, 62, 66, 68, 69, 72, 74 and 75, and add new Claims 78-80 to read as follows.

Claims 1-58 (cancelled)

59. (Currently amended) An information processing apparatus connected with a printing device, comprising:

a display unit adapted to display a setting window including a set value of a first setting item for printing and a set value of a second setting item for printing; and

a first changing unit adapted to, when the set value of the first setting item displayed in the setting window is changed into a second value from a first value, change the set value of the second setting item displayed in the setting window into a fourth value from a third value without ~~any operation~~ a change instruction made by a user if determined to be desirable to change the third value of the second setting item in accordance with the second value of the first setting item, for printing, and adapted to, when the set value of the first setting item displayed in the setting window is changed into the second value from the first value, change the set value of the second setting item displayed in the setting window into the fourth value from the third value in response to a change instruction made by the

user if determined to be desirable to change the third value of the second setting item in accordance with the second value of the first setting item, for printing.

Claim 60 (cancelled)

61. (Currently amended) An information processing apparatus according to claim 60 59, wherein said ~~second~~ changing unit displays an operation window for ~~an operation~~ the change instruction made by the user and changes the second setting item displayed in the setting window into the fourth value from the third value if determined that the user makes the ~~operation~~ change instruction to change the value of the second setting item.

62. (Currently amended) An information processing apparatus according to claim 61, wherein said ~~second~~ changing unit does not change the third value of the second setting item for printing displayed in the setting window if not determined that the user makes the ~~operation~~ change instruction to change the value of the second setting item.

63. (Previously presented) An information processing apparatus according to claim 59, comprising a host computer.

64. (Previously presented) An information processing apparatus according to claim 59, wherein the first setting item and the second setting item include a setting of the printing device.

65. (Previously presented) An information processing apparatus according to claim 59, wherein the first setting item includes a setting for a medium and the second setting item includes a setting for a printing method.

66. (Currently amended) A setting method for printing, comprising:
a displaying step of displaying a setting window including a set value of a first setting item for printing and a set value of a second setting item for printing; and
a first changing step of, when the set value of the first setting item displayed in the setting window is changed into a second value from a first value, changing the set value of the second setting item displayed in the setting window into a fourth value from a third value without ~~any operation~~ a change instruction made by a user if determined to be desirable to change the third value of the second setting item in accordance with the second value of the first setting item, for printing, and, when the set value of the first setting item displayed in the setting window is changed into the second value from the first value, changing the set value of the second setting item displayed in the setting window into the fourth value from the third value in response to a change instruction made by a user if determined to be desirable to change the third value of the second setting item in accordance with the second value of the first setting item, for printing.

Claim 67 (cancelled)

68. (Currently amended) A method according to claim 67 ~~66~~, wherein in said ~~second~~ changing step, an operation window for ~~an operation~~ the change instruction made by the user is displayed and the second setting item displayed in the setting window is changed into the fourth value from the third value if determined that the user makes the ~~operation~~ change instruction to change the value of the second setting item.

69. (Currently amended) A method according to claim 68, wherein, in said ~~second~~ changing step, the third value of the second setting item displayed in the setting window is not changed if not determined that the user makes the ~~operation~~ change instruction to change the value of the second setting item.

70. (Previously presented) A method according to claim 66, wherein the first setting item and the second setting item include a setting of the printing device.

71. (Previously presented) A method according to claim 66, wherein the first setting item includes a setting for a medium and the second setting item includes a setting for a printing method.

72. (Currently amended) A computer program product comprising a computer readable medium having computer program code for a method of setting for printing, said product comprising:

displaying process code for displaying a setting window including a set value of a first setting item for printing and a set value of a second setting item for printing;
and

first changing process code for, when the set value of the first setting item displayed in the setting window is changed into a second value from a first value, changing the set value of the second setting item displayed in the setting window into a fourth value from a third value without ~~any operation~~ a change instruction made by a user if determined to be desirable to change the third value of the second setting item in accordance with the second value of the first setting item, for printing, and, when the set value of the first setting item displayed in the setting window is changed into the second value from the first value, changing the set value of the second setting item displayed in the setting window into the fourth value from the third value in response to a change instruction made by a user if determined to be desirable to change the third value of the second setting item in accordance with the second value of the first setting item, for printing.

Claim 73 (cancelled)

74. (Currently amended) A computer program product according to claim ~~73~~ 72, wherein in said ~~second~~ changing process code, an operation window for an

~~operation~~ the change instruction made by the user is displayed and the second setting item displayed in the setting window is changed into the fourth value from the third value if determined that the user makes the ~~operation~~ change instruction to change the value of the second setting item.

75. (Currently amended) A computer program product according to claim 74, wherein, in said ~~second~~ changing process code, the third value of the second setting item displayed in the setting window is not changed if not determined that the user makes the ~~operation~~ change instruction to change the value of the second setting item.

76. (Previously presented) A computer program product according to claim 72, wherein the first setting item and the second setting item include a setting of the printing device.

77. (Previously presented) A computer program product according to claim 72, wherein the first setting item includes a setting for a medium and the second setting item includes a setting for a printing method.

78. (New) A computer program product according to claim 72, wherein, if determined that the change instruction by the user is required, the set value of the second setting item is changed without the change instruction in said changing process code,

otherwise the set value of the second setting item is changed in response to the change instruction by the user in said changing process code.

79. (New) An information processing apparatus according to claim 59, wherein, if the change instruction by the user is required, said changing unit changes the set value of the second setting item without the change instruction, otherwise said changing unit changes the set value of the second setting item in response to the change instruction by the user.

80. (New) A method according to claim 66, wherein, if determined that the change instruction by the user is required, the set value of the second setting item is changed without the change instruction in said changing step, otherwise the set value of the second setting item is changed in response to the change instruction by the user in said changing step.
